

PETROLEUM ECONOMICS SEMINAR

SPEAKER | DWAYNE PURVIS

FEBRUARY 4, 2020 | HOUSTON, TX

An engineer explains the creation and use of cash flows in the oil business. The course explains both the concepts and the methods for the inputs:

- Engineering the volume forecast
- Predicting future prices
- Calculating netback prices
- Estimating operating and capital costs

And it addresses the use of the cash flows for various strategies and situations:

- Determining value, making an investment decision
- Assessing risk
- Building a strategy and a portfolio

At the end of the day, participants should have a functional understanding of each of the dynamics that affect cash flow and an appreciation for their quantification.

Accredited for 7 continuing education credits, including 1 ethics.
